Analytical release-stroke and lunar capture bounds
Release-stroke compatibility
3 g study screen
10 g study screen
25 g study screen
1.3 m Gen5 acceleration zone
0.25 m compact screen
0.08 m historical cell
Ideal minimum relative stroke [m]
Required relative speed [m/s]
Common 100 km circular lunar target
Capture into staging orbit
Later circularization at 100 km
Ideal carrier impulse [m/s]
100 × 100
100 × 1,000
100 × 10,000
Initial lunar staging altitudes [km]
